

Machining

At Brooks Forgings our machine shop and tool room can offer the full range of machining operations. Whether you need us to machine your free issue product or just supply the complete component from start to finish we can help.

Over the last 45 years we have built up considerable knowledge and expertise in machining all types of forgings, pressings, castings and fasteners. Our fully refurbished machining facility houses 20 machines, from **CNC/VMC's** to lathes, specially installed for our bar turned and fastener work. We have capacity to deal with small orders of 10 or 20 right up to supplying 20,000 components per week depending on complexity.

Over the years we have succeeded in gaining a reputation for a very fast turnaround of work to satisfy the requirements of our customers who operate a 'just in time' system. All of this work we carry out under the control of our **ISO9001** quality system.
